TAKE THE GUESSWORK OUT OF HEART FAILURE MANAGEMENT

The CardioMEMS™ HF System provides the actionable data you need to empower intelligent remote monitoring.
HOW THE CARDIOMEMS™ HF SYSTEM WORKS
Empowers care teams to proactively manage heart failure.

The PA sensor is inserted via right heart catheterization.

Patient takes daily sensor reading from the comfort of their home.

Data wirelessly transmitted to Merlin.net™ Patient Care Network, a secure website that easily presents PA pressure data to inform proactive treatment modifications.

Clinician reviews data and contacts patient, as necessary.

THE GROWING PROBLEM OF HEART FAILURE
Heart failure is a serious disease with major implications in the U.S.

EVERY HEART FAILURE HOSPITALIZATION INCREASES YOUR PATIENT’S RISK FOR DEATH

6.2 MILLION people have heart failure

1 IN 9 DEATHS each year from heart failure

$30.7 BILLION annual cost of heart failure

EARLY INSIGHT WITH THE CARDIOMEMS™ HF SYSTEM
Take action as filling pressures rise—weeks before decompensation.

Proactive and Actionable
Real-time remote monitoring shows changes in pulmonary artery (PA) pressure, an early indicator of worsening heart failure.

Reactive and Inexact
Care teams have traditionally had to rely on physical markers, such as weight, blood pressure and symptoms.

HOSPITALIZATION

-30 -20 -10 0

Filling Pressure Increase

Intrathoracic Impedance Change

Autonomic Adaptation

Pre-symptomatic Congestion

Hemodynamically Stable

Symptoms

Weight Change

LEADING THE WAY IN HEART FAILURE MANAGEMENT

As the heart failure remote monitoring system with the most clinical evidence, the CardioMEMS™ HF System has proven to be much more than just a predictor of impending hospitalizations.

REDUCTIONS IN 30-DAY READMISSIONS
Reducing the need for readmissions:

- **78%** heart failure specific
- **58%** All cause

REDUCTION IN HOSPITALIZATIONS
Reduction in hospitalizations for both types of heart failure and the ONLY management tool proven for HFpEF patients:

- **60%** reduction in HFpEF hospitalizations
- **57%** reduction in heart failure hospitalizations
- **54%** reduction in HFrEF hospitalizations

REDUCTION IN MORTALITY
Reducing the overall mortality rate:

- **30%** lower mortality rate

*Medicare-eligible patients
STAYING HOME—AND OUT OF THE HOSPITAL

The CardioMEMS HF System is the personalized approach your patients deserve. It helps them stay out of the hospital and reconnect with their lives, by restoring the ability to engage in simple day-to-day activities.

Remote monitoring makes it possible to manage patients while decreasing frequency of clinic appointments.

You can send customizable messages about lifestyle or medication changes to patients via the myCardioMEMS app.

DO YOU HAVE PATIENTS WHO CAN BENEFIT?

The CardioMEMS HF System is indicated for patients with:

- NYHA Class III heart failure, and
- One heart failure hospitalization in the last 12 months

Patients who most commonly receive the CardioMEMS HF System:

- Are on GDMT and have fluid volumes that are hard to know or measure
- Have HFrEF or HFrEF
- Would benefit from remote monitoring because they live far from a clinic

The CardioMEMS HF System changed all of our lives. Her doctor gets the chance to see how she is doing from afar to be able to treat her. They can maintain or alter her medications, or prescribe things she wouldn’t normally be able to take had she not been monitored remotely. I’m not sure there’s much more of an upgrade of technology than the CardioMEMS HF System.

Brief Summary: Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

CardioMEMS™ HF System Indications and Usage: The CardioMEMS™ HF System is indicated for wirelessly measuring and monitoring pulmonary artery (PA) pressure and heart rate in New York Heart Association (NYHA) Class III heart failure patients who have been hospitalized for heart failure in the previous year. The hemodynamic data are used by physicians for heart failure management and with the goal of reducing heart failure hospitalizations.

CardioMEMS™ HF System Contraindications: The CardioMEMS HF System is contraindicated for patients with an inability to take dual antiplatelet or anticoagulants for one month post implant.

CardioMEMS™ HF System Potential Adverse Events: Potential adverse events associated with the implantation procedure include, but are not limited to, the following: Infection, Arrhythmias, Bleeding, Hematoma, Thrombus, Myocardial infarction, Transient ischemic attack, Stroke, Death, and Device embolization.

myCardioMEMS™ Mobile App Limitations: Patients must use their own Apple® or Android® mobile device to receive and transmit information to the myCardioMEMS™ mobile app. To do so the device must be powered on, app must be installed and data coverage (cellular or Wi-Fi) available. The myCardioMEMS™ app can provide notification of medication adjustments and reminders, requests for lab work and acknowledgment that the PA pressure readings have been received. However there are many internal and external factors that can hinder, delay, or prevent acquisition and delivery of the notifications and patient information as intended by the clinician. These factors include: patient environment, data services, mobile device operating system and settings, clinic environment, schedule/configuration changes, or data processing.
