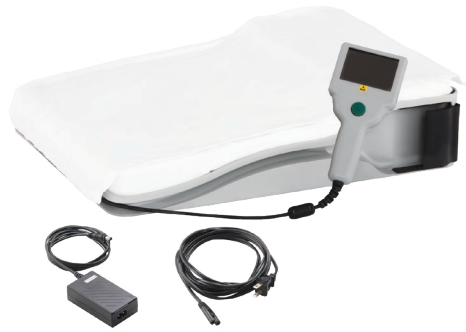
HEART FAILURE MONITORING SYSTEM

CardioMEMS™ HF System

Patient Electronics System



Product Highlights

- The CardioMEMS™ HF System is the first and only FDA-approved heart failure (HF) monitor proven to significantly reduce HF hospital admissions and improve quality of life in NYHA Class III patients. When used by clinicians to manage HF, the CardioMEMS HF System is:
  - **Safe and reliable** — demonstrates 99.6% freedom from device or system complications[1]
  - **Clinically proven** — reduced HF hospitalizations by 57%[1]
  - **Proactive and personalized** — patient management through direct monitoring of PA pressure and titration of medications
- The CardioMEMS HF System provides direct pulmonary artery (PA) pressure monitoring using the sensor, patient electronics system and the Merlin.net™ Patient Care Network (PCN) to manage patient data
- Patient-initiated sensor readings are wirelessly transmitted to an electronics unit and stored in a secure website for clinicians to access and review
- The patient electronics system is designed for patients to use at home
- The patient electronics system powers the sensor using RF energy; receives and processes the frequency information from the sensor; and converts the data into pressure waveforms, PA pressure values and heart-rate measurements, and transmits PA data to the Merlin.net PCN website

Ordering Information

Contents: Patient Electronics System

MODEL NUMBER	DESCRIPTION
CM1100	Patient Electronics System – Cellular
CM1170	Fabric Cover
CM1050	Accessory — Orientation Ball
CM3040	Accessory — Wi-Fi Adapter
CM1120	Electronics Travel Case
CM3020	US Power Cord — 125V 7A
CM1110	Power Supply
CM3024	Power Cord Clip

HEART FAILURE MONITORING SYSTEM

Physical Specifications

Model	**CM1100**
Electronics Unit	
Dimensions (H x W x L, inches)	5 x 16.25 x 21.4
Weight (lbs)	10
Power	
Supply Voltage	12v DC, 4.2A
Provided Power Supply	Medical Grade Class II. Input: 100-240V, 50-60Hz, output: 12v DC, 4.2A. Manufacturer part number: CC-002403.
Power Cord	Only use power cord supplied by the manufacturer.
Radiofrequency (RF) Characteristics	
Transmitted Electrical Power	< 1 mW e.r.p.
Operating Frequency	30-37.5 MHz (under normal operating conditions the measurement bandwidth is approximately 1 MHz within the operating frequency range)
Processing Capabilities	
I/O	USB, VGA
Handheld Display	Reference manufacturer's part number CS-001261
Display	
Touch Screen	Resistive
Brightness	250 cd/m²
Resolution	320 x 240, color
Environmental	
Operation	5° to 40° C (41° to 104° F), 15% to 93% humidity (non-condensing), 700-1060 hPa (electronics), 800-1150 hPa (implanted sensor)
Transportation	-25° to 70° C (-13° to 158° F), 15% to 93% humidity
Storage	-25° to 70° C (-13° to 158° F), 15% to 93% humidity
Available Languages	
English	
Danish (Dansk)	
Finnish (Suomi)	
Swedish (Svenska)	
Norwegian (Norsk)	
Portuguese	
German (Deutsch)	
French (Français)	
Spanish (Español/España)	
American Spanish (Español/ Latinoamerica)	
Dutch (Nederlands)	
Italian (Italiano)	

Rx Only

Brief Summary: Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

CardioMEMS™ HF System Indications and Usage: The CardioMEMS™ HF System is indicated for wirelessly measuring and monitoring pulmonary artery (PA) pressure and heart rate in New York Heart Association (NYHA) Class III heart failure patients who have been hospitalized for heart failure in the previous year. The hemodynamic data are used by physicians for heart failure management and with the goal of reducing heart failure hospitalizations.

CardioMEMS™ HF System Contraindications: The CardioMEMS™ HF System is contraindicated for patients with an inability to take dual antiplatelet or anticoagulants for one month post implant.

CardioMEMS™ HF System Potential Adverse Events: Potential adverse events associated with the implantation procedure include, but are not limited to, the following: infection, arrhythmias, bleeding, hematoma, thrombus, myocardial infarction, transient ischemic attack, stroke, death, and device embolization.
