

WHY PATIENTS LIKE YOU HAVE SAID “YES” TO REMOTE MONITORING WITH THE CARDIOMEMS™ HF SYSTEM

“One of the things I like about the CardioMEMS HF System is that it’s not another medication. The device catches that we are getting sick before we even feel it. Therefore, we don’t need to get sick before we get better. They’re making us better before we get sick. That’s what I like about the device.”

ED C. — implanted with the CardioMEMS HF System in 2015

“To know that someone is watching and helping me by looking at my numbers while I am at home, to know where I stand, has made the biggest difference in my life. I feel like my health is in my control.”

IRIS W. — implanted with the CardioMEMS HF System in 2015

Brief Summary: Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

Indications and Usage: The CardioMEMS™ HF System is indicated for wirelessly measuring and monitoring pulmonary artery (PA) pressure and heart rate in New York Heart Association (NYHA) Class III heart failure patients who have been hospitalized for heart failure in the previous year. The hemodynamic data are used by physicians for heart failure management and with the goal of reducing heart failure hospitalizations.

Contraindications: The CardioMEMS HF System is contraindicated for patients with an inability to take dual

antiplatelet or anticoagulants for one month post implant.

Potential Adverse Events: Potential adverse events associated with the implantation procedure include, but are not limited to, the following: Infection, Arrhythmias, Bleeding, Hematoma, Thrombus, Myocardial infarction, Transient ischemic attack, Stroke, Death and Device embolization.
