

EARLY TREATMENT IS ESSENTIAL

Regular monitoring from your home allows you and your heart failure medical team to get ahead of heart failure before it progresses.

A study found that with each subsequent heart failure-related admission, the patient leaves the hospital with a further decrease in cardiac function and heart failure prognosis worsens dramatically.¹

In a clinical study of heart failure patients,* the CardioMEMS™ HF System led to a/an:

SIGNIFICANT IMPROVEMENT IN QUALITY OF LIFE²

INCREASE IN SIX-MINUTE WALK DISTANCE³

REDUCTION IN HEART FAILURE HOSPITALIZATIONS²

STAY AHEAD OF HEART FAILURE AT HOME

How the CardioMEMS™ HF System works

Sensor is inserted using a common procedure.

You simply take a 2–3 minute daily measurement of the sensor from the comfort of your home.

Your healthcare provider reviews your information and contacts you when necessary.

*In the CHAMPION clinical trial (CardioMEMS Heart Sensor Allows Monitoring of Pressures to Improve Outcomes in NYHA Class III Heart Failure Patients), patients with moderate (NYHA Class III) heart failure for at least three months, irrespective of left ventricular ejection fraction, and a heart failure hospitalization within the past 12 months were included in the study.
