Pre-dilate the lesion to \( \geq \) the outer diameter of the stent

- Longer inflation times recommended

**Preparation and Sizing Chart**

<table>

</tr>
<tr>
<td>7.5 mm</td>
<td>7.0 mm – 7.5 mm</td>
<td>( \geq 7.5 ) mm</td>
</tr>
</tbody>
</table>

**Deployment Steps and Technique**

1. Flush the delivery system with saline, wipe the outer sheath to activate the hydrophilic coating, and load the distal end of the tip onto a 0.014” or 0.018” guide wire.
2. Advance the catheter until the Distal Sheath Marker and Stent Length Marker encompass the target lesion.
3. Rotate only the System Lock to the unlocked position.
4. Increase and maintain magnification for entire procedure to better visualize stent deployment.
5. Under fluoroscopy, initiate stent deployment by advancing the Thumb Slide while allowing the outer sheath to retract proximally.
6. Under fluoroscopy, continuously and slowly retract and advance the Thumb Slide multiple times. Shorter Thumb Slide advancements may provide greater control. Repeat until Thumb Slide advancement no longer deploys the stent.
7. Rotate the Deployment Lock to the unlocked position and fully advance the Thumb Slide to completely release the stent.
8. Confirm under fluoroscopy that the entire stent is released.
9. Fully retract the Thumb Slide to the starting position, then rotate the System Lock and Deployment Lock into the locked position.
10. Remove the device under fluoroscopy.
11. Post-dilate as needed.

**Supera™ is like no other stent**

CAUTION: This product is intended for use by or under the direction of a physician. Prior to use, reference the Instructions for Use, inside the product carton (when available) or at eifu.abbottvascular.com or at medical.abbott/manuals for more detailed information on Indications, Contraindications, Warnings, Precautions and Adverse Events.

Information contained herein for DISTRIBUTION outside of the U.S. only. Check the regulatory status of the device in areas where CE marking is not the regulation in force.
