

YOU'VE GOT YOUR NUMBER

Download the myCardioMEMS™ app today for better peace of mind.

Abbott is here to help you and your doctor stay in touch and empower you in your heart failure care journey. Because heart failure should be more than manageable. It should feel like a partnership—which is why we want to make sure you're connected with the myCardioMEMS™ app.

EMPOWERED **CONVENIENCE.**

The myCardioMEMS App provides you or your caregiver your daily Pulmonary Artery (PA) Pressure reading within a matter of minutes. This is the same number your doctors uses to monitor your heart failure.

CLOSER **COMMUNICATION.**

Before you feel any symptoms, or have to go to the hospital, you can get messages from your doctor. This includes lifestyle modifications, and what medication changes you should make. You can also designate a “caregiver” to receive and respond to messages and help you keep track of your care.

The myCardioMEMS™ app can be downloaded from the App Store® for your iPhone® mobile digital device and on Google Play® for your Android® device.

WITH THE MYCARDIOMEMS™ APP YOU CAN:

GET CUSTOM MESSAGES

with specific guidance based on your PA reading.

VIEW MONTHLY HISTORY

of transmissions and messages from clinics.

RECEIVE NOTIFICATIONS

from your clinic to adjust your heart failure medications based on your PA pressure readings.

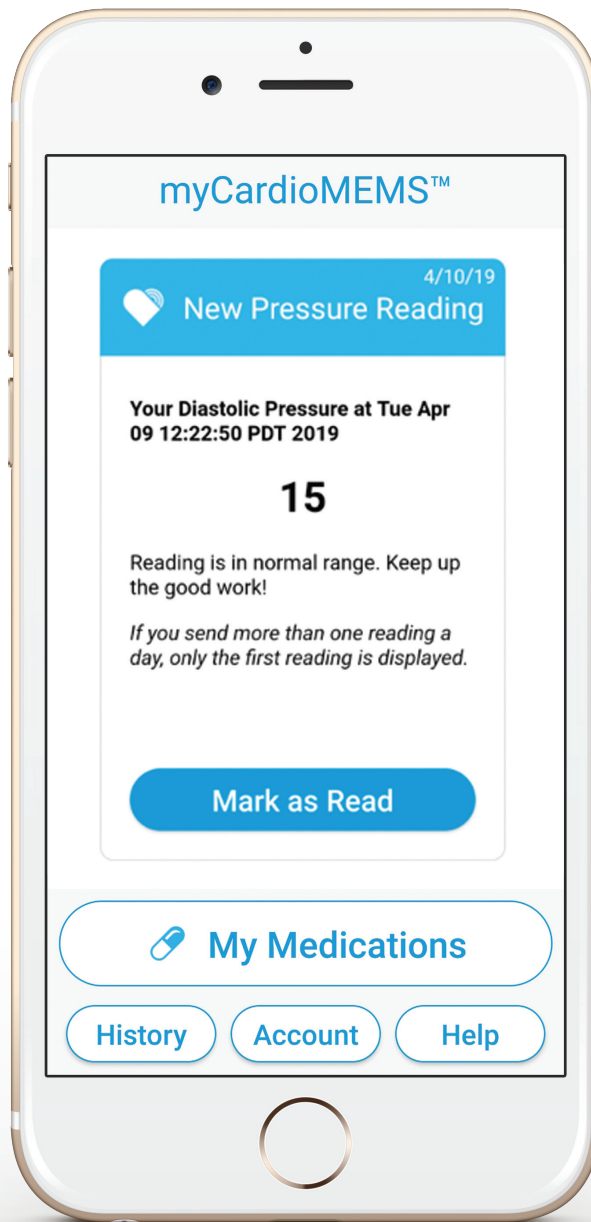

SEE REAL-TIME TRANSMISSION STATUS

of your CardioMEMS™ HF System readings.

GET REMINDERS

to take your heart failure medication.

BRIEF SUMMARY: Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

INDICATIONS AND USAGE: The CardioMEMS™ HF System is indicated for wirelessly measuring and monitoring pulmonary artery (PA) pressure and heart rate in New York Heart Association (NYHA) Class III heart failure patients who have been hospitalized for heart failure in the previous year. The hemodynamic data are used by physicians for heart failure management and with the goal of reducing heart failure hospitalizations.

CONTRAINDICATIONS: The CardioMEMS HF System is contraindicated for patients with an inability to take dual antiplatelet or anticoagulants for one month post implant.

POTENTIAL ADVERSE EVENTS: Potential adverse events associated with the implantation procedure include, but are not limited to, the following: Infection, Arrhythmias, Bleeding, Hematoma, Thrombus, Myocardial infarction, Transient ischemic attack, Stroke, Death, and Device embolization.

LIMITATIONS: Patients must use their own Apple® or Android® mobile device to receive and transmit information to the myCardioMEMS™ mobile app. To do so the device must be powered on, app must be installed and data coverage (cellular or Wi-Fi) available. The myCardioMEMS™ app can provide notification of medication adjustments and reminders, requests for lab work and acknowledgement that the PA pressure readings have been received. However there are many internal and external factors that can hinder, delay, or prevent acquisition and delivery of the notifications and patient information as intended by the clinician. These factors include: patient environment, data services, mobile device operating system and settings, clinic environment, schedule/configuration changes, or data processing.
