CARDIOGUIDE™ HF APP
PRODUCT DEVELOPMENT AND SCIENTIFIC RESEARCH CONSENT

By clicking “Accept”, I consent to the processing of my personal information (e.g., name and email address) and my Sensitive Data (i.e., information related to my health) by Abbott Laboratories ("Abbott") (and its contracted service providers) in relation to the CardioGuide™ HF App (the “App”) and derived from my use of the App for scientific research and to analyze and monitor trends for future product development.

Abbott’s goal is to use data analysis and scientific research with the overall aim to provide greater access to life-changing medical devices, improve our products, and advance clinical care as further described in the CardioGuide™ HF App Privacy Notice (see Section "Abbott’s Use of Your Personal Information") (hereafter "Research"). This Research is an important aspect for public health in general and may also help to further improve your treatment in the future.

Providing consent for Research is entirely free and has no effect on your use of the App.

This consent does not apply to research that is part of a clinical trial or as instructed by a Health Care Provider. Where required by applicable law, you will be asked to provide a separate informed consent to the research site prior to participating in a clinical trial sponsored by Abbott.

For more information about how Abbott uses your information please review the **App Privacy Notice** and our **Consumer Health Data Privacy Policy**.

I understand I can withdraw my consent at any time by using the options made available to me through the App. If I choose to withdraw my consent, Abbott will discontinue processing my personal information for marketing purposes (as described above) where required by applicable law.

Residents of certain states may withdraw their consent to certain collection and processing by contacting Abbott as set out in the “+Contact Us” section of the **App Privacy Notice**. This does not apply where Abbott collects and processes your information based on your health care provider’s instructions. If you have questions about how your health care provider uses your information, you should contact your health care provider directly.
